

ADAS Insider | Issue 01 | October 2026
A lot is changing in ADAS repair, and this issue covers what matters for your shop. Inside: who's responsible when a calibration is sublet, why ADAS MAP PRO was named a 2026 MOTOR Top 20 winner and free training from our Master Techs.

CALIBRATION LIABILITY

1 in 2

repaired vehicles need a calibration.
The liability stays with your shop.

Sending It Out Doesn't Send the Liability With It
About half of repaired vehicles now need at least one calibration, based on more than 5 million estimates. Even when a shop sublets that work, the liability stays with the shop.

- Your best protection is documentation. For every calibration, keep a record of:
- The OEM procedure followed
 - Calibration results
 - The technician and equipment used
 - Your sublet provider's qualifications

Whether you calibrate in-house or send it out, this one-pager covers what to document on every job. And if you sublet, it explains how asTech remote calibrations done to procedure are backed by up to \$31 million in indemnification per claim.

ADAS MAP PRO

From ADAS identification to estimate action.

Award-Winning ADAS MAP PRO: From ADAS Identification to Estimate Action
ADAS MAP tells you which ADAS operations are required. ADAS MAP PRO, just named a [2026 MOTOR Top 20 winner](#), helps you put those findings to work.

PRO connects your ADAS findings directly to the CCC estimating workflow. Review identified operations, select what belongs on the estimate and import ADAS MAP data into CCC without rekeying. You can also access resources like ALLDATA, OEM1Stop and I-CAR RTS without leaving the workflow, and the ADAS MAP inspection report can go straight into CCC Attachments so documentation follows the job.
